BLACKHAWK *Hydraulic* JACKS

HARNESSED HYDRAULIC POWER

FOR BODY REBUILDING, FRAME AND AXLE STRAIGHTENING, AND SCORES OF OTHER TOUGH JOBS

This is PORTO PUMP — the power house of Porto-Power. Easy, one-hand operation and control.

Remotely Controlled

This is the 6-foot high pressure, flexible PORTO HOSE. It transmits hydraulic power to Porto Ram.

This is PORTO RAM — the business end of Porto-Power — 7-ton capacity. Lifts, pushes, spreads, bends and straightens. Used in Porto Press — or directly on body and frame work — also many other jobs. Operates in any position.

YES SIR! — Harnessed Hydraulic Power REMOTELY CONTROLLED! That's what Blackhawk Porto-Power brings when it rolls into your shop. Porto-Power's remote control feature is loaded with advantages for you.

Steady pressure holds combinations of Porto Ram and attachments in place while pump is operated — set-ups cannot be jiggled out of position. Assemblies are light weight — simple to set up — operator stands at safe distance where he can watch progress of work.

And Porto-Power gives you bigger profits because it handles hundreds of tricky, time-eating jobs easily and quickly.

Ask your Jobber Salesman for a Porto-Power demonstration. Better yet — order a Model S-100.

**BLACKHAWK MFG. CO., Dept. AD-7
MILWAUKEE, WISCONSIN**

Here the S-100 Porto-Power is straightening a door frame with the remarkable "Flex-Heads." Note that operator stands where he can watch work line up.
